10. There _____ nine people on the team.

- a. are b. is c. am d. has

11. The school library is open from nine _____ four.

- a. On b. for c. until d. by

Read the following passage and tick (✓) the best answer.

The food we eat seems to have profound effects on our health. Although science has made enormous steps in making food more fit to eat, it has, at the same time, made many foods unfit to eat. Some research has shown that perhaps 80% of all human illnesses are related to diet and 40% of cancer is related to the diet as well, especially cancer of the colon. People of different cultures are more prone to contract certain illnesses because of the characteristic foods they consume. That food is related to illness is not a new discovery. In 1945, government researchers realized that nitrates and nitrites (commonly used to preserve color in meats) as well as other food additives caused cancer. Yet, these carcinogenic additives remain in our food, and it becomes more difficult all the time to know which ingredients on the packaging labels of processed food are helpful or harmful.

The additives that we eat are not all so direct. Farmers often give penicillin to cattle and poultry, and because of this, penicillin has been found in the milk of treated cows. Sometimes similar drugs are administered to animals not for medical purposes, but for financial reasons. The farmers are simply trying to fatten the animals in order to obtain a higher price on the market. Although the Food and Drug Administration (FDA) has tried repeatedly to control these procedures, the practices continue.

_____ A healthy diet is directly related to good health. Often we are unaware of detrimental substances we ingest. Sometimes well-meaning farmers or others who do not realize the consequences add these substances to food without our knowledge.

12. How has science done a disservice to people?

- a. Because of science, disease caused by contaminated food has been virtually eradicated.
- b. It has caused a lack of information concerning the value of food.
- c. As a result of scientific intervention, some potentially harmful substances have been added to our food.
- d. The scientists have preserved the color of meats, but not of vegetables.

13. The word “prone” in line 5 is nearest in meaning to-

- a. supine
- b. unlikely
- c. harmful
- d. predisposed

14. What are nitrates used for?

- a. They preserve flavor in packaged foods.
- b. They preserve the color of the meat.
- c. They are the object of research.
- d. They cause the animals to become fatter.

15. FDA means-

- a. Food Direct Additives
- b. Final Difficult Analysis
- c. Federal Dairy Additives
- d. Food and Drug Administration

16. The word “these” in the line 8 refers to-

- a. meats b. colors c. researchers d. nitrates and nitrites

17. In line 8, the word “carcinogenic” is closest in meaning to-

- a. trouble-making b. color-retaining
c. money-making d. cancer-causing

18. All of the following statements are true EXCEPT-

- a. drugs are always given to animals for medical reasons.
b. some of the additives in our food are added to the food itself and some are given to the living animals.
c. researchers have known about the potential hazards of food additives for more than 45 years.
d. food may cause 40% of cancer in the world.

19. The word “additives” in line 7 is closest in meaning to-

- a. added substances b. natural substances
c. dangerous substances d. benign substances

20. What is the best title for this passage?

- a. Harmful and Harmless Substances in Food b. Improving Health through a Natural Diet
c. The Food You Eat Can Affect Your Health d. Avoiding Injurious Substances in Food
